Crude ash

3%

Crude fibre

**Instructions for use:** this food is suitable for adult cats of all breeds. The consumption of compound feed can vary from (30 g - 60 g) per day depending on the animal's weight (2 kg - 5 kg), also depending on the breed, as well as physical activity and environmental conditions. Your cat will need a few days to get used to the new diet, so it is not recommended to change it abruptly. Do this progressively, mixing it with your usual food and successively increasing the proportion over time, until it completely replaces the previous food. Make sure that fresh drinking water is always available to your cat. You should also keep the package tightly closed, in a cool, dry place, isolated from sunlight and protected from possible pests.
